

About Us

PayXPOS is a technology-based ecosystem connector and a leading service provider of next-generation digital payment solutions. Designed to create value for retailers and financial institutions, our solutions provide businesses with ultimate control, flexibility and savings. PayXPOS offers a turnkey platform with state-of-the-art components to run a robust digital payment infrastructure. Our platform is secure, digitized, and adapts to various payment systems and channels, making it easy to integrate with third-party providers. In partnership with **Visa and Mastercard** and with the most secure and compliant systems, our clients can focus on their business with complete peace of mind.

Meet the all-new **Tap to Phone by PayXPOS** - the most advanced tap & go app for retailers and financial institutions. Tap to Phone allows our clients to convert their mobile phones into payment acceptance devices with the same security as physical payment terminals. In partnership with Visa and Mastercard, our application adheres to the most secure and compliant requirements. We save businesses money and time by receiving electronic payments without having to invest in costly hardware such as a point-of-sale (POS) device, fixed data or telephone lines before they can start transacting. Merchants can now embrace a cost-effective, efficient, sustainable, and secure way to receive payments, directly on their phone. Just set it up in a few taps, and you are ready to go.

Our vision

To be the most secure, digitised, and unique payment platform that offers total flexibility, control, and savings to our clients.

Our benefits:

Save time & money

Get faster checkouts in-store or at curbside pickups without costly terminals

Secure

Give your business and customers iron-clad security

Instant payments

Process all card payments quickly, easily, and safely

No card terminal

Save space and get rid of bulky payment terminals

Easy mobile setup

No complicated steps. Just download the app and start

Eco-friendly

Get digital receipts to save paper and the planet too
